PROFILE

MSc graduate in Engineering and Management of Information Systems with hands-on experience in building analytical datasets from raw data, covering data ingestion, transformation, modeling, and visualization. Experienced in working with real-world industrial and mobility data using Python, SQL, ETL and BI tools, with a strong interest in growing in data-driven teams.

SKILLS

TECHNICAL SKILLS

- **Programming & Data:** Python (Pandas), SQL (MySQL, IBM db2)
- **Data Engineering & ETL:** Apache NiFi (professional context); Talend · Airflow · Databricks (academic context)
- **BI & Visualization:** Power BI, Superset, Tableau, IBM Cognos, Grafana

SOFT SKILLS

- Soft Skills: Teamwork · Responsibility · Persistence · Problem-solving · Resilience · Adaptability

LANGUAGES

- Portuguese (native)
- English
- French

WORK EXPERIENCE

Junior Data Analyst | Jan 2025 – Present

CCG/ZGDV - ICT Innovation Institute

- Analyzed real industrial sensor data from CSV files using **Python (Pandas)** to assess machine performance, equipment wear, and energy consumption.
- Designed and automated end-to-end ETL pipelines using **Apache NiFi and Python** to ingest, clean, validate, and transform raw data into analysis-ready datasets.
- Designed and developed a **MySQL Data Warehouse** using multidimensional modeling (star schema) and **SQL** views to support consistent reporting and analytical queries.
- Built interactive dashboards using **Power BI, Apache Superset, and Grafana** to monitor industrial KPIs and operational performance.
- Developed a synthetic urban mobility data generator in **Python** based on planned STCP routes, enabling analysis in the absence of real operational data.
- Designed and implemented a domain ontology and knowledge graph in **Neo4j**, integrating external factors (weather and public events) to analyze mobility patterns and behavioral changes.

EDUCATION

MSc in Engineering and Management of Information Systems

University of Minho 2018-2024

- Master's thesis focused on the development of data-driven business models based on the IT service needs of startups and SMEs, resulting in a unified digital platform to support business model development in the eHealth domain.
- Designed and implemented ETL processes using **Talend** to structure and analyze geophysical datasets (earthquakes, tsunamis, and volcanoes), and built **Tableau** dashboards to support analytical exploration and decision-making.
- Applied data analysis and machine learning techniques using Python (**Pandas, NumPy, Matplotlib**) to analyze banking data related to credit risk and loan default prediction.

CERTIFICATIONS

- **SQL, ETL and BI Fundamentals - IBM (2025)**
- **SQL from basic to advanced (with MySQL and Project) - Udemy (2024)**
- **Power BI Complete - From Basic to Advanced - Udemy (2024)**
- **ERPsim Game EMEA South with an SAP S/4HANA system - SAP Next-Gen (2021)**
